DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group 2, claims 2-7, and cancellation of claim 1 in response to the Restriction requirement of 08 March 2005 is noted and has been entered in the file.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear what applicant is referring to in claims 2 and 4 with respect to "division of aperture," since no aperture is provided any other place in the claim. Appropriate correction is required. Claims 3 and 5-7 are included for their dependence on claims 2 and 4.

Allowable Subject Matter

Claims 2-7 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

The following is a statement of reasons for the indication of allowable subject matter: the prior art of record, taken alone or in combination, fails to disclose or render obvious a spectro-polarimeter that includes a prismatic lens aligned with the optical axis to divide an image, by refraction, into a plurality of collimated offset images, or a method of measuring complete spectral content of an image that includes performing division by refraction of a collimated

image into four angularly offset images, in combination with the rest of the limitations of the claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sekiguchi (5,729,011) discloses a spectroscopic apparatus and spectroscopic image recording apparatus that includes separating an image of an object into a plurality of images using a lens but fails to provide polarization analysis.

Braun et al. (US 6,177,992 B1) disclose a low insertion loss optical monochromator that includes separation of a signal from an object into a plurality of signals having different polarization but fails to provide imaging.
